

세일 가격 표시

1. Quick view

```
liquid × product-grid-item.liquid × product.quickview.liquid ×  
<div class="prices">  
  {% if product.compare_at_price > product.price %}  
    <span class="compare-price">  
      {{ product.compare_at_price_max | money }}  
    </span>  
    <span class="price on-sale" itemprop="price">  
      <span class="money" data-product-id="{{ product.id }}">{{ product.price | money }}</span>  
    </span>  
  </div>
```

"prices"에 if문으로 "price on-sale" 추가

```
▼ <div class="prices"> flex  
  ▼ <span class="price" itemprop="price">  
    <span class="money" data-product-id="6627696312405">$699</span>  
  </span>  
</div>
```

```
▼ <div class="prices"> flex  
  <span class="compare-price"> $699 </span>  
  ▼ <span class="price on-sale" itemprop="price">  
    <span class="money" data-product-id="6639835709525">$629</span>  
  </span>  
</div>
```

2. Grid view

\$699	\$699 \$629

```

ate.liquid x product-grid-item.liquid x product.quickview.liquid x
<div class="price-box">
  {% if on_sale %}
  <p class="sale">
    <span class="old-price">
      {{ product.compare_at_price_min | money }}
    </span>
    <span class="special-price">
      <span class="money" data-product-id="{{ product.id }}">{{ product.price_min | money }}</span>
    </span>
  </p>
  {% else %}

```

"price-box"의 if문으로 "sale" or "regular-product" 선택

```

▼ <div class="price-box">
  ▼ <div class="regular-product">
    ▼ <span data-currency-twd=""
      <span class="money" data-product-id="6602283810901">$699</span>
    >
    <span class="money" data-product-id="6602283810901" data-currency-twd="$699">$699</span>
  </span>
</div>
</div>
</div>

```

```

▼ <div class="price-box">
  ▼ <p class="sale">
